

MILAN AIRPORTS

# UNDER A NEW SKY

# SEA Group

We manage the Milan Malpensa and Milan Linate airports, combining sustainability and innovation. We guarantee connections to one of the most developed catchment areas in Europe, to the main destinations in the world, fostering the economic growth of the region and Northern Italy.

*“Everyone has their own reason for travelling and that reason is at the heart*

MILAN

# Our Values

We set our **coordinates for change** aiming to strengthen our ability to effectively meet the challenges that lie ahead and to continue on our path of **sustainable**, integrated and inclusive **growth**.

## Diamond of values

The values that inspire our company both internally and in our stakeholder relations revolve around three main ethical axes: the ethics of **VALUE**, **SERVICE** and **RELATIONS**, which in turn are translated into **concrete qualities and values** that are essential to achieving these goals. The nine values and three ethical levels are deeply interconnected.

# Our Business

## COMMERCIAL AVIATION

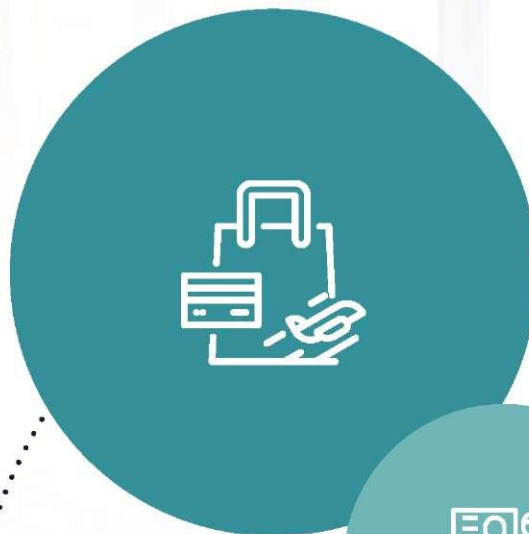

Commercial aviation comprises both aviation business and non-aviation business

### Aviation Business

- Operation, development and maintenance of airport infrastructure and facilities
- Aircraft ground operations management
- Acquisition of new carriers and growth of existing carriers
- Airport security services

### Non-Aviation Business

- Allocation of retail and food spaces with the aim of ensuring a variety of brands and formats to meet the needs of all passengers travelling through Milan Linate and Milan Malpensa airports
- Real Estate activities

MilanAirports

## GENERAL AVIATION

General aviation includes ground operations and passenger assistance for private flights at Milan Linate and Milan Malpensa Prime airports

# Milan Malpensa

## The world passes through here

Milan Malpensa airport offers an extensive network of direct domestic, international and intercontinental destinations for business and leisure travel. It is Italy's second-largest airport by passenger traffic and among the top twenty in Europe. Milan Malpensa is the leading airport for Northern Italy, acting as a gateway to the city of Milan.

# Milan Linate

## The real city airport

Milan Linate Airport provides connections to and from major national and international European destinations. Thanks to its strategic location in the metropolitan area, just 8 km from the centre of Milan, the airport is a true city airport. Recently renovated with an elegant, contemporary design, Linate is now a functional, welcoming airport that can sustain the growth trend of Lombardy's capital, a city that is constantly on the move, and meet the demand for flights from operators and passengers.

# Milan MALPENSA -

## The leader in freight traffic

It is the national hub for the distribution of import and export goods. Thanks to its extensive infrastructure, it is the leading cargo airport in Italy and fifth in Europe in terms of freight traffic. Volume growth has also been influenced by the strong development of e-commerce, which has mainly favoured couriers.

# Milan Prime Linate and Malpensa

## True luxury airports

Milan Prime at Linate and Malpensa are the facilities dedicated to Business & General Aviation managed by SEA Prime, the leading operator in Italy and third in the eurozone. Managed infrastructure includes two dedicated terminals and aprons, hangars, VIP lounges, meeting rooms and car parks. Milan Prime offers – directly or through its partners – a full range of services dedicated to aircraft, passengers and crew. The services on offer include concierge, hangars, maintenance, dedicated security filters, catering, supplies, limousines and tax refunds.

# Travelling towards

# Ready for a new era

Safe, state-of-the-art, functional, technological, welcoming and above all sustainable: this is how Malpensa and Linate airports will be in the near future. A promise that is ahead of the game, ushering in the start of a new path of sustainability that revolves around three strategic elements we hold dear: **environment, people, community and local area**.

# Sustainability. Our commitment: zero emissions by 2030

Milan airports are among the first airports to accelerate the target of zero CO2 emissions by 2030 compared to the planned date of 2050.

To achieve this, we are investing in innovative projects, most notably:

## GREEN HYDROGEN POWER

The introduction of green hydrogen for fuelling aircraft and refuelling non-aviation vehicles. This also includes SEA's participation in the **OLGA (hOListic Green Airport)** project, approved and financed by the European Commission, through which our company has undertaken to build, with the collaboration of **Snam**, for the first time in an airport, Milan Malpensa, a hydrogen power plant both for airport vehicles and for connections to and from the airport.

## SUSTAINABLE MOBILITY

Increasingly focusing on sustainable **mobility** such as trains, electric cars and metro to reach our airports

## SAF FUEL

Use of **SAF** (Sustainable Aviation Fuel). SEA has signed an **agreement with ENI** to introduce in the short term refuelling of sustainable biofuel from vegetable and waste raw materials also on commercial flights

## URBAN AIR MOBILITY

Building infrastructure for **Urban Air Mobility**, such as the **vertiports** we are planning near our airports

THE **SKY**  
IS **GREEN**

# Passenger-oriented innovation

We invest in innovation as the most effective response to the increasing complexity of our business. We have identified digital and technological solutions to increasingly improve our services. And we will continue to explore new ways to make the passenger experience at our airports even more unique.

[Discover all our projects online](#)

## SMART SECURITY

New hand luggage screening machines allow passengers to avoid opening their luggage to take out liquids, creams and electronic devices, while maintaining maximum security

## FACE BOARDING

Security and boarding control based on facial recognition for more immediate gate access

## SELF-SERVICE BAG DROP

Self-service solution allowing passengers to check in their checked baggage completely independently

## E-GATES

Automatic gates that read biometric data extracted from the e-passport to optimise border controls
