

Ground Safety Recommendation 20 - 2017

## **GROUND SAFETY RECOMMENDATION**

## **Airbus A380 STAND entry**

## **JET BLAST AREA**

- ✓ JET BLAST effects could involve aircrafts and equipment even in back parking areas;
- ✓ Airbus A380 taxis at idle with the aid of 4 engines in order to reach a greater thrust distribution, anyway sometimes it can apply more power to complete the entry parking maneuver:
- ✓ Due to flow speed and high temperatures, the area behind the A380 engines therefore requires further mitigation measures.

On the basis of the information already provided by Coordinamento di Scalo staff, all Operators must secure people and equipment until the complete aircraft engines stop

## Be safe at all times!

Make sure that this Ground Safety Recommendation is dearly visible at your workplace (Safety Corner)
